

My name is Jishank Rimal, and I am an undergraduate student pursuing a Bachelor of Information Technology (BIT). I am passionate about software development, artificial intelligence, and building technology that solves real-world problems. I enjoy learning by creating practical projects and continuously improving my technical and problem-solving skills.

Currently, I am focused on my studies while actively learning modern software development technologies through self-study and hands-on projects. I dedicate much of my time to improving my programming skills, exploring AI applications, and building real-world projects that strengthen my practical experience. I am not currently employed or in an internship, but I continuously work on personal projects to prepare myself for future career opportunities in software engineering.

I have experience with C, Python, HTML, CSS, JavaScript, PHP, MySQL, and Flutter, and I am currently learning AI technologies such as Large Language Models (LLMs) and Retrieval-Augmented Generation (RAG). Some of my notable projects include Carpool Nepal, a ride-sharing platform, and Trendzkart Nepal, an e-commerce website for trending products. These projects have helped me gain practical experience in web development, backend programming, database management, API development, UI/UX design, and problem-solving. I believe in learning through building rather than only studying theory.

One secret about me is that I love eating biryani with sauce ketchup.
