

Rohan Basnet

My name is **Rohan Basnet**. I am currently studying at **Ayan School of Engineering** and am passionate about building a career in the data domain. My main interests are **Data Engineering** and **Data Analytics**. I enjoy learning how data is collected, processed, stored, and transformed into meaningful insights that support better decision-making.

I am continuously improving my technical skills through hands-on projects and practice. My current tech stack includes **Python**, **SQL**, **Databricks**, and **PySpark**. I am also interested in ETL pipelines, database management, data visualization, and modern cloud-based data platforms. My long-term goal is to become a skilled data engineer capable of designing scalable data pipelines and delivering reliable analytical solutions.

I believe that curiosity, consistency, and continuous learning are essential qualities for success in technology. Every new project gives me an opportunity to strengthen my problem-solving abilities and deepen my understanding of data-driven systems.

My "Not-So-Secret" Secret

One thing I don't mind sharing anymore is that I can be a bit lazy at times, and I'm definitely a sleepy person! If nobody wakes me up, I'm perfectly happy sleeping until around **8:00 AM**. It's one of my quirks, but I'm actively working on becoming more disciplined and productive as I continue my journey toward a career in data engineering and analytics. I believe that recognizing my weaknesses is the first step toward improving them.
