

Abhishek Kumar Sah

B.Tech in Artificial Intelligence | Aryan School of Engineering, Purbanchal University

STATEMENT OF PURPOSE

Introduction

My name is Abhishek Kumar Sah, and I am currently pursuing my Bachelor of Technology in Artificial Intelligence at Aryan School of Engineering, affiliated with Purbanchal University. I am writing to express my interest in an internship opportunity where I can apply my technical skills, contribute meaningfully to real projects, and continue growing as a developer and AI practitioner.

Academic Background and Motivation

Beyond my formal coursework, I actively invest time in learning topics that extend past my college syllabus. I believe that building a strong foundation requires curiosity and consistent effort outside the classroom, so I have enrolled in and completed multiple courses covering software development and applied artificial intelligence. Not every course or project has gone exactly as planned, but I have come to see failure as the starting point of growth rather than a setback — a mindset that keeps me motivated to keep learning and improving.

Practical Experience and Projects

TruthLens AI — Misinformation Detection Web Application: I am currently building a full-stack application designed to help users assess the credibility of content they encounter online. The platform accepts images, screenshots, text, and URLs as input, and returns a trust score, flagged reasons, and plain-English recommendations to the user. The frontend is built with React, Vite, and Tailwind CSS, while the backend uses Node.js and Express, with the Anthropic Claude API powering the underlying content analysis. This project has given me hands-on experience with end-to-end product development, from scaffolding the architecture to designing how AI-generated results are communicated clearly to non-technical users.

Solving the Travelling Salesperson Problem using Hopfield Neural Networks: As part of my academic coursework, I completed an in-depth case study applying Hopfield-Tank neural networks to the Travelling Salesperson Problem. This involved tuning convergence parameters, generating and interpreting result visualizations, and benchmarking the approach against real-world routing systems such as UPS ORION, Google OR-Tools, and Amazon SCOT. The project strengthened my understanding of optimization techniques and how theoretical AI models translate into practical, large-scale logistics solutions.

Skills and Approach

Through these projects, I have developed practical skills in full-stack web development (React, Node.js, Express), applied AI and machine learning concepts, and technical documentation. I place a strong emphasis on writing clean, readable code rather than relying on unnecessary complexity, as I believe maintainable code is just as important as functional code in any real-world team setting.

Closing

I am eager to bring this same curiosity, discipline, and hands-on approach to an internship role where I can learn from experienced professionals, contribute to meaningful projects, and continue developing as a well-rounded software and AI engineer. I welcome the opportunity to discuss how my background and enthusiasm for building real-world software products align with your team's needs.

Sincerely,
Abhishek Kumar Sah
